

HELPING PROTECT YOUR FAMILY FROM THE FLU.¹

The best way to help protect yourself and your family against the flu is by getting a flu shot.² Fluzone Quadrivalent vaccine helps protect people as young as 6 months of age against 4 different strains of the flu.¹

Here are some questions to ask your doctor or pharmacist to find out more about Fluzone Quadrivalent vaccine:

- Will my child get a different dose of Fluzone Quadrivalent vaccine than I do?
- Why isn't Fluzone Quadrivalent vaccine approved for use in children younger than 6 months of age?
- Can Fluzone Quadrivalent vaccine give me or my child the flu?
- What side effects could I or my child get from Fluzone Quadrivalent vaccine?

IMPORTANT SAFETY INFORMATION

Fluzone Quadrivalent vaccine should not be administered to anyone with a severe allergic reaction (eg, anaphylaxis) to any vaccine component, including eggs, egg products, or thimerosal (the multidose vial is the only presentation containing thimerosal), or to a previous dose of any influenza vaccine.

Tell the doctor if you/your child has ever experienced Guillain-Barré syndrome (severe muscle weakness) after a previous dose of influenza vaccine. If you notice any other problems or symptoms following vaccination, please contact your health care professional immediately.

Side effects to Fluzone Quadrivalent vaccine include pain at the injection site (all ages) and redness and swelling at the injection site (in children); muscle aches, fatigue, and headache (irritability, abnormal crying, drowsiness, appetite loss, vomiting, and fever in young children). Other side effects may occur. Vaccination with Fluzone Quadrivalent vaccine may not protect all individuals.

INDICATION

Fluzone Quadrivalent vaccine is given to people 6 months of age and older to help prevent influenza disease caused by influenza A and B strains contained in the vaccine.
